

Assembly: Introduction.

Yipeng Huang

Rutgers University

February 23, 2021

Table of contents

Announcements

Floats: Review

- Normalized: exp field

- Normalized: frac field

- Normalized/denormalized

- Special cases

Floats: Mastery

- Normalized number bitstring to real number it represents

- Floating point multiplication

- Properties of floating point

Instruction set architectures

- why are instruction set architectures important

- 8-bit vs. 16-bit. vs. 32-bit vs. 64-bit

- CISC vs. RISC

Looking ahead

Class plan

1. Today, Tuesday, 2/23: Bits to oats. Introduction to the software-hardware interface.
2. Reading assignment for next four weeks: CS:APP Chapter 3.
3. Thursday, 2/25: Programming Assignment 3 on bits, bytes, integers, oats out.
4. Monday, 3/1: Programming Assignment 2 due. Be sure to test on ilab, "make clean". Quiz 6 on oatting point trickiness out.

Floats: Mastery

- Normalized number bitstring to real number it represents

- Floating point multiplication

- Properties of floating point

Instruction set architectures

- why are instruction set architectures important

- 8-bit vs. 16-bit. vs. 32-bit vs. 64-bit

- CISC vs. RISC

Floating point numbers

Avogadro's number

+6.02214 $\times 10^{23}$ mol⁻¹

Scientific notation

- | sign
- | mantissa or significant
- | exponent

Floats and doubles

Figure: The two standard formats for floating point data types. Image credit CS:APP

Floats and doubles

property	float	double
total bits	32	64
sign bit	1	1
exp bits	8	11
frac bits	23	52
C printf() format specifier	"%f"	"%lf"

Table: Properties of floats and doubles

The IEEE 754 number line

Figure: Full picture of number line for floating point values. Image credit CS:APP

Figure: Zoomed in number line for floating point values. Image credit CS:APP

Different cases for floating point numbers

Value of the floating point number = $(-1)^s M 2^E$

- | E is encoded the exp field
- | M is encoded the frac field

Figure: Different cases within a floating point format. Image credit CS:APP

Normalized and denormalized numbers

Two different cases we need to consider for the encoding of E, M

Normalized: exp eld

For normalized numbers,

$$0 < \text{exp} < 2^k - 1$$

- | exp is a k-bit unsigned integer

Bias

- | need a bias to represent negative exponents
- | $\text{bias} = 2^{k-1} - 1$
- | bias is the k-bit unsigned integer: 011..111

For normalized numbers,

$$E = \text{exp} - \text{bias}$$

In other words, $\text{exp} = E + \text{bias}$

	property	oat	double
	k	8	11
	bias	127	1023
smallest E (greatest precision)		-126	-1022
largest E (greatest range)		127	1023

Table: Summary of normalized exp eld

Normalized: frac eld

$$M = 1.\text{frac}$$

Floats: Summary

	normalized	denormalized
value of number	$(-1)^s M 2^E$	$(-1)^s M 2^E$
E	$E = \text{exp} - \text{bias}$	$E = -\text{bias} + 1$
bias	$2^{k-1} - 1$	$2^{k-1} - 1$
exp	$0 < \text{exp} < (2^k - 1)$	$\text{exp} = 0$
M	$M = 1.\text{frac}$ M has implied leading 1	$M = 0.\text{frac}$ M has leading 0
	greater range large magnitude numbers denser near origin	greater precision small magnitude numbers evenly spaced

Table: Summary of normalized and denormalized numbers

Floats: Special cases

number class	when it arises	exp	eld	frac	eld
+0 / -0		0		0	
+infinity / -infinity	overflow or division by 0	2^k	1	0	
NaN not-a-number	illegal ops. such as $\sqrt{-1}$, inf-inf, inf*0	2^k	1	non-0	

Table: Summary of special cases

Normalized/denormalized

Special cases

Floats: Mastery

Normalized number bitstring to real number it represents

Floating point multiplication

Properties of floating point

Instruction set architectures

why are instruction set architectures important

8-bit vs. 16-bit. vs. 32-bit vs. 64-bit

CISC vs. RISC

Normalized number bitstring to real number it represents

- | Tiny FP: 1-bit s, 4-bit exp, 3-bit frac
- | What does this encode: 1_1001_101
- | s=1, so positive? negative?
- | $\text{exp} = 1001_2$
- | $\text{bias} = 2^{k-1} - 1 = 2^{4-1} - 1 = 7$
- | $E = \text{exp} - \text{bias} =$
- | $\text{frac} = 101_2$
- | $M = 1.\text{frac} = 1:101_2$

How to multiply scientific notation?

Recall: $\log(xy) = \log(x) + \log(y)$

Floating point multiplication

Properties of boiling point

Properties of boiling point

Instruction set architectures

why are instruction set architectures important

8-bit vs. 16-bit. vs. 32-bit vs. 64-bit

CISC vs. RISC

Computer organization

Layer cake

- | Society
- | Human beings
- | Applications
- | Algorithms
- | High-level programming languages
- | Interpreters
- | Low-level programming languages
- | Compilers
- | Architectures
- | Microarchitectures
- | Sequential/combinational logic
- | Transistors
- | Semiconductors
- | Materials science

why are instruction set architectures important

Interface between computer science and electrical and computer engineering

- | Software is varied, changes
- | Hardware is standardized, static

Computer architect Fred Brooks and the IBM 360

- | IBM was selling computers with different capacities,
- | Compile once, and can run software on all IBM machines.
- | Backward compatibility.
- | An influential idea.

CISC vs. RISC

Complex instruction set computer

- | Intel and AMD
- | Have an extensive and complex set of instructions
- | For example: x86's extensions: x87, IA-32, x86-64, MMX, 3DNow!, SSE, SSE2, SSE3, SSSE3, SSE4, SSE4.2, SSE5, AES-NI, CLMUL, RDRAND, SHA, MPX, SGX, XOP, F16C, ADX, BMI, FMA, AVX, AVX2, AVX512, VT-x, VT-d, AMD-V, AMD-Vi, TSX, ASF
- | Can license Intel's compilers to extract performance
- | Secret: inside the processor, they break it down to more elementary instructions

CISC vs. RISC

Reduced instruction set computer

- | MIPS, ARM, RISC-V (can find Patterson and Hennessy Computer Organization and Design textbook in each of these versions), an PowerPC
- | Have a relatively simple set of instructions
- | For example: ARM's extensions: SVE;SVE2;TME; All mandatory: Thumb-2, Neon, VFPv4-D16, VFPv4 Obsolete: Jazelle
- | ARM: smartphones, Apple ARM M1 Mac
