

# Representing and Manipulating Information: Bits, Ints, and Ops

Yipeng Huang

Rutgers University

February 22, 2022

# Table of contents

## Announcements

- Quizzes and programming assignments
- Reading and class session plan

## Bits and bytes

- Why binary
- Decimal, binary, octal, and hexadecimal
- Bitwise operations
- Representing characters

## Integers and basic arithmetic

- Representing negative and signed integers

# Quizzes and programming assignments

## Short quiz 3

- ▶ No weekly short quiz this week. Focus on PA2 instead.

## Programming assignment 2

- ▶ Has been out, due Thursday February 24, 11:59 pm.

## Programming assignment 3

- ▶ Will be released Thursday February 24.

# Reading and class session plan

## Reading: CS:APP Chapter 2

- ▶ Chapter 2: Representing and manipulating information
- ▶ Read Chapter 2.4: floating point.

## Class session plan

1. Today: Integers.
2. Thursday: Floats.

# Table of contents

## Announcements

- Quizzes and programming assignments
- Reading and class session plan

## Bits and bytes

- Why binary
- Decimal, binary, octal, and hexadecimal
- Bitwise operations
- Representing characters

## Integers and basic arithmetic

- Representing negative and signed integers

## Everything is bits

- Each bit is 0 or 1
- By encoding/interpreting sets of bits in various ways
  - Computers determine what to do (instructions)
  - ... and represent and manipulate numbers, sets, strings, etc...
- Why bits? **Electronic Implementation**
  - Easy to store with bistable elements
  - Reliably transmitted on noisy and inaccurate wires

## Decimal, binary, octal, and hexadecimal

| Decimal | Binary | Octal | Hexadecimal | Decimal | Binary | Octal | Hexadecimal |
|---------|--------|-------|-------------|---------|--------|-------|-------------|
| 0       | 0b0000 | 0o0   | 0x0         | 8       | 0b1000 | 0o10  | 0x8         |
| 1       | 0b0001 | 0o1   | 0x1         | 9       | 0b1001 | 0o11  | 0x9         |
| 2       | 0b0010 | 0o2   | 0x2         | 10      | 0b1010 | 0o12  | 0xA         |
| 3       | 0b0011 | 0o3   | 0x3         | 11      | 0b1011 | 0o13  | 0xB         |
| 4       | 0b0100 | 0o4   | 0x4         | 12      | 0b1100 | 0o14  | 0xC         |
| 5       | 0b0101 | 0o5   | 0x5         | 13      | 0b1101 | 0o15  | 0xD         |
| 6       | 0b0110 | 0o6   | 0x6         | 14      | 0b1110 | 0o16  | 0xE         |
| 7       | 0b0111 | 0o7   | 0x7         | 15      | 0b1111 | 0o17  | 0xF         |

In C, format specifiers for printf() and fscanf():

1. decimal: `'%d'`
2. binary: none
3. octal: `'%o'`
4. hexadecimal: `'%x'`

# Decimal, binary, octal, and hexadecimal

How to represent the range of unsigned char in each?

Unsigned char is one byte, 8 bits.

1. decimal: 0 to 255
2. binary: 0b0 to 0b11111111
3. octal: 0 to 0o377 (group by 3 bits)
4. hexadecimal: 0x00 to 0xFF (group by 4 bits)

# Bitwise operations

## Why are bitwise operations important?

- ▶ Network and UNIX settings using bit masks (e.g., `umask`)
- ▶ Hardware and microcontroller programming (e.g., Arduinos)
- ▶ Instruction set architecture encodings (e.g., ARM, x86)

# Bitwise operations

$\sim$ : bitwise NOT

unsigned char a = 128

$$\begin{aligned} a &= 0b1000\_0000 \\ \sim a &= \sim 0b1000\_0000 \\ &= 0b0111\_1111 \\ &= 127 \end{aligned}$$

| $b$ | $\sim b$ |
|-----|----------|
| 0   | 1        |
| 1   | 0        |

# Bitwise operations

**&: bitwise AND**

$$\begin{aligned} 3 \& 1 &= 0b11 \& 0b01 \\ &= 0b01 \\ &= 1 \end{aligned}$$

| a | b | a & b |
|---|---|-------|
| 0 | 0 | 0     |
| 0 | 1 | 0     |
| 1 | 0 | 0     |
| 1 | 1 | 1     |

# Bitwise operations

|: bitwise OR

$$\begin{aligned} 3|1 &= 0b11|0b01 \\ &= 0b11 \\ &= 3 \end{aligned}$$

$$\begin{aligned} 2|1 &= 0b10|0b01 \\ &= 0b11 \\ &= 3 \end{aligned}$$

| a | b | a   b |
|---|---|-------|
| 0 | 0 | 0     |
| 0 | 1 | 1     |
| 1 | 0 | 1     |
| 1 | 1 | 1     |

# Bitwise operations

$\wedge$ : bitwise XOR

$$\begin{aligned} 3 \wedge 1 &= 0b11 \wedge 0b01 \\ &= 0b10 \\ &= 2 \end{aligned}$$

| a | b | $a \wedge b$ |
|---|---|--------------|
| 0 | 0 | 0            |
| 0 | 1 | 1            |
| 1 | 0 | 1            |
| 1 | 1 | 0            |

## `inplaceSwap.c`: Swapping variables without temp variables.

How does it work?

# Don't confuse bitwise operators with logical operators

## Bitwise operators

▶ ~

▶ &

▶ |

▶ ^

## Logical operators

▶ !

▶ &&

▶ ||

▶ != (for bool type)

# Representing characters

- ▶ char is a 1-byte, 8-bit data type.
- ▶ ASCII is a 7-bit encoding standard.
- ▶ "man ascii" to see Linux manual.
- ▶ Compile and run `ascii.c` to see it in action.
- ▶ Some interesting characters: 7 (bell), 10 (new line), 27 (escape).

**USASCII code chart**

| Bits |    |    |        |   | USASCII code chart |     |     |    |   |   |   |   |     |
|------|----|----|--------|---|--------------------|-----|-----|----|---|---|---|---|-----|
| b7   | b6 | b5 | Column |   | Row                | 0   | 1   | 2  | 3 | 4 | 5 | 6 | 7   |
| 0    | 0  | 0  | 0      | 0 | 0                  | NUL | DLE | SP | 0 | @ | P | \ | p   |
| 0    | 0  | 0  | 0      | 1 | 1                  | SOH | DC1 | !  | 1 | A | Q | a | q   |
| 0    | 0  | 0  | 1      | 0 | 2                  | STX | DC2 | "  | 2 | B | R | b | r   |
| 0    | 0  | 0  | 1      | 1 | 3                  | ETX | DC3 | #  | 3 | C | S | c | s   |

# Table of contents

## Announcements

- Quizzes and programming assignments
- Reading and class session plan

## Bits and bytes

- Why binary
- Decimal, binary, octal, and hexadecimal
- Bitwise operations
- Representing characters

## Integers and basic arithmetic

- Representing negative and signed integers

# Representing negative and signed integers

## Ways to represent negative numbers

1. Sign magnitude
2. 1s' complement
3. 2's complement

# Representing negative and signed integers

Sign magnitude

Flip leading bit.

# Representing negative and signed integers

## 1s' complement

- ▶ Flip all bits
- ▶ Addition in 1s' complement is sound
- ▶ In this encoding there are 2 encodings for 0
- ▶ -0: 0b1111
- ▶ +0: 0b0000

# Representing negative and signed integers

## 2's complement

| signed char | weight in decimal |
|-------------|-------------------|
| 00000001    | 1                 |
| 00000010    | 2                 |
| 00000100    | 4                 |
| 00001000    | 8                 |
| 00010000    | 16                |
| 00100000    | 32                |
| 01000000    | 64                |
| 10000000    | -128              |

Table: Weight of each bit in a signed char type

- ▶ what is the most positive value you can represent? 127
- ▶ what is the most negative value you can represent? -128
- ▶ how to represent -1? 11111111
- ▶ how to represent -2? 11111110

# Representing negative and signed integers

## 2's complement

| signed char | weight in decimal |
|-------------|-------------------|
| 00000001    | 1                 |
| 00000010    | 2                 |
| 00000100    | 4                 |
| 00001000    | 8                 |
| 00010000    | 16                |
| 00100000    | 32                |
| 01000000    | 64                |
| 10000000    | -128              |

Table: Weight of each bit in a signed char type

- ▶ MSB: 1 for negative
- ▶ To make a number negative: flip all bits and add 1.
- ▶ Addition in 2's complement is sound
