Accessing materials

- ▶ Class canvas: <https://rutgers.instructure.com/courses/210629>
- ▶ Most of the time, materials are on the Modules page
- ▶ Long range syllabus linked from Canvas:
<https://yipenghuang.com/teaching/2023-spring/>

Recitations

- ▶ Recitations start today.
- ▶ More information here:
https://rutgers.instructure.com/courses/210629/pages/recitation-and-office-hour-information?module_item_id=7956869
- ▶ Review the material and get help on the programming assignments.

Why use Linux?

Do you have Linux? Trick question...

Why use Linux?

- ▶ Stable
- ▶ Open source
- ▶ Flexible: all form factors (wearables, IoT, Raspberry Pi, Roku, Android, laptops, iLab, web hosting, warehouse-scale datacenters)
- ▶ A critical piece of infrastructure for practicing computer science

Key steps to get going

1. **Activate account:** `https://services.cs.rutgers.edu/accounts/`
2. **Familiarize yourself with CS department infrastructure:** `https://resources.cs.rutgers.edu/docs/new-users/beginners-info/`
3. **Use what you are familiar with to log onto iLab remotely. Command line:** Windows command line, macOS, terminal, PuTTY. **Graphical:** X2Go...
`https://resources.cs.rutgers.edu/docs/other/working-at-home/`
4. **Use what you are familiar with to move files. SCP, Filezilla, Cyberduck...**
`https://resources.cs.rutgers.edu/docs/file-storage/accessing-files-remotely/`
5. **Use what you are familiar with to edit files. Vim, Emacs, other text editors, VS Code...**

Accessing the programming assignments

1. **Canvas:** `https://rutgers.instructure.com/courses/210629/assignments/2449056?module_item_id=7956894`
2. **GitHub:** `https://github.com/yipenghuang0302/2023_0s_221`
3. Cloning a repository
4. `git`: version control tool; interfaces with `github.com`

Preview of the plan for programming assignments

1. PA0, 1.25% of course grade, five day work time
2. PA1, 6.25% of course grade, two week work time
3. PA2, 12.5% of course grade, two week work time
4. PA3, 12.5% of course grade, two week work time
5. PA4, 12.5% of course grade, three week work time
6. PA5, 12.5% of course grade, two week work time
7. PA6, 12.5% of course grade, two week work time

Why study C?

C is fast

- ▶ C is close to the machine: directly manipulate memory
- ▶ C is compiled
- ▶ C is strongly typed

C is influential

- ▶ C is old
- ▶ C has a relatively short specification
- ▶ Influenced Java, Python, C++, and most major programming languages
- ▶ <https://www.tiobe.com/tiobe-index/>

See one, do one, teach one

To practice programming, you can...

- ▶ Read about it from a book (e.g., Modern C).
- ▶ Listen about it from someone talking about concepts (e.g., lecture slides in Supplementary Reading).
- ▶ Watch someone else program.
- ▶ Practice it.
- ▶ Explain / teach it to a friend.

`rootFinder`: A program that prints square roots if integer

Program structure

Opening a file

Reading characters from a file

Printing to command line

Compiling and running your program

rootFinder: A program that prints square roots if integer

- ▶ Headers
- ▶ Command line arguments
- ▶ Opening files
- ▶ Reading from files
- ▶ `printf` and format specifiers
- ▶ `EXIT_SUCCESS`

Including headers

- ▶ `#include <stdio.h>`
- ▶ `#include <stdlib.h>`
- ▶ `#include <stdbool.h>`
- ▶ `#include <math.h>`

Command line arguments: First encounter with pointers

What is `char* argv[]`

Figure: Image credit: <http://www.csc.villanova.edu/~mdamian>

In C, Strings, `char*`, and `char[]` are all the same

- ▶ `char greeting[6] = {'H', 'e', 'l', 'l', 'o', '\0'};`
- ▶ `char greeting[] = "Hello";`

Opening a file

The mode in `FILE *fopen(const char *filename, const char *mode)`

- ▶ "r": read from the file
- ▶ "w": write, starting at the beginning of the file
- ▶ "a": write, starting at the end of the file (append)

Reading characters from a file

- ▶ `int fgetc(FILE *stream)`
- ▶ `char *fgets(char *str, int n, FILE *stream)`
- ▶ `int fscanf(FILE *stream, const char *format, ...)`

Printing to command line

The format string in `printf(char* format, args)`

- ▶ `%d`: integer
- ▶ `%ld`: long integer
- ▶ `%s`: string
- ▶ `%c`: character
- ▶ `%f`: float

Compiling and running your program

How does a program end up on your computer?

```
gcc -Wall -Werror -fsanitize=address -std=c99 -o  
rootFinder rootFinder.c -lm
```

- ▶ gcc: GNU C Compiler
- ▶ -Wall -Werror: Enable helpful warnings.
- ▶ -fsanitize=address: Enable memory checking.
- ▶ -std=c99: Set C standard version number.
- ▶ -o rootFinder: Output binary.
- ▶ rootFinder.c: Source file.
- ▶ -lm: Link the math library implementation.

Compiling and running your program

How does a program end up on your computer?

How a Makefile works

- ▶ $\$@$: target file name
- ▶ $\$<$: first prerequisite
- ▶ $\$^$: all prerequisites
