Unsigned fixed-point binary for fractions

unsigned fixed-point char example	weight in decimal
1000.0000	8
0100.0000	4
0010.0000	2
0001.0000	1
0000.1000	0.5
0000.0100	0.25
0000.0010	0.125
0000.0001	0.0625

Table: Weight of each bit in an example fixed-point binary number

- ▶ $.625 = .5 + .125 = 0000.1010_2$
- ▶ $1001.1000_2 = 9 + .5 = 9.5$

Signed fixed-point binary for fractions

signed fixed-point char	example	weight in decimal
	1000.0000	-8
	0100.0000	4
	0010.0000	2
	0001.0000	1
	0000.1000	0.5
	0000.0100	0.25
	0000.0010	0.125
	0000.0001	0.0625

Table: Weight of each bit in an example fixed-point binary number

- ▶ $-.625 = -8 + 4 + 2 + 1 + 0 + .25 + .125 = 1111.0110_2$
- ▶ $1001.1000_2 = -8 + 1 + .5 = -6.5$

$$-\pi \approx -3.14159 \dots$$

$$\begin{array}{r} -8.00000 \\ \swarrow \\ -3.14159 \dots \end{array}$$

$$\begin{array}{r} 3.14159 \dots \\ \hline 0011.001 \dots \\ \hline 2.1409 \\ 2 \\ \hline 1.14159 \\ 1 \\ \hline 0.14159 \\ 0.125 \\ \hline 1 \dots \end{array}$$

Limitations of fixed-point

- ▶ Can only represent numbers of the form $x/2^k$
- ▶ Cannot represent numbers with very large magnitude (great range) or very small magnitude (great precision)

Bit shifting

$\ll N$ Left shift by N bits

- ▶ multiplies by 2^N
- ▶ $2 \ll 3 = 0000_0010_2 \ll 3 = 0001_0000_2 = 16 = 2 * 2^3$
- ▶ $-2 \ll 3 = 1111_1110_2 \ll 3 = 1111_0000_2 = -16 = -2 * 2^3$

$\gg N$ Right shift by N bits

- ▶ divides by 2^N
- ▶ $16 \gg 3 = 0001_0000_2 \gg 3 = 0000_0010_2 = 2 = 16/2^3$
- ▶ $-16 \gg 3 = 1111_0000_2 \gg 3 = 1111_1110_2 = -2 = -16/2^3$

Floating point numbers

Avogadro's number

$$+6.02214 \times 10^{23} \text{ mol}^{-1}$$

Scientific notation

- ▶ sign
- ▶ mantissa or significand
- ▶ exponent

$$60.2214 \times 10^{22}$$

$$0.602214 \times 10^{24}$$

Floating point numbers

Before 1985

1. Many floating point systems.
2. Specialized machines such as Cray supercomputers.
3. Some machines with specialized floating point have had to be kept alive to support legacy software.

After 1985

1. IEEE Standard 754.
2. A floating point standard designed for good numerical properties.
3. Found in almost every computer today, except for tiniest microcontrollers.

Recent

1. Need for both lower precision and higher range floating point numbers.
2. Machine learning / neural networks. Low-precision tensor network processors.

Floats and doubles

Single precision

Double precision

Floats and doubles

property	half*	float	double
total bits	16	32	64
s bit	1	1	1
exp bits	5	8	11
frac bits	10	23	52
C printf() format specifier	None	"%f"	"%lf"

Table: Properties of floats and doubles

The IEEE 754 number line

Different cases for floating point numbers

$$\text{Value of the floating point number} = (-1)^s \times M \times 2^E$$

- ▶ E is encoded the exp field
- ▶ M is encoded the frac field

Figure: Different cases within a floating point format. Image credit CS:APP

Normalized and denormalized numbers

Two different cases we need to consider for the encoding of E , M

Table of contents

Fractions and fixed point representation

`monteCarloPi.c` Using floating point and random numbers to estimate PI

Floats: Overview

Floats: Normalized numbers

- Normalized: exp field

- Normalized: frac field

- Normalized: example

Normalized: exp field

For normalized numbers,

$$0 < \text{exp} < 2^k - 1$$

- ▶ exp is a k -bit unsigned integer

Bias

- ▶ need a bias to represent negative exponents
- ▶ $\text{bias} = 2^{k-1} - 1$
- ▶ bias is the k -bit unsigned integer:
011..111

For normalized numbers,

$$E = \text{exp} - \text{bias}$$

In other words, $\text{exp} = E + \text{bias}$

property	float	double
k	8	11
bias	127	1023
smallest E (greatest precision)	-126	-1022
largest E (greatest range)	127	1023

Table: Summary of normalized exp field

Normalized: frac field

$$M = 1.\text{frac}$$

Normalized: example

- ▶ 12.375 to single-precision floating point
- ▶ sign is positive so $s=0$
- ▶ binary is 1100.011_2
- ▶ in other words it is $1.100011_2 \times 2^3$
- ▶ $\text{exp} = E + \text{bias} = 3 + 127 = 130 = 1000_0010_2$
- ▶ $M = 1.100011_2 = 1.\text{frac}$
- ▶ $\text{frac} = 100011$
